

Press release January 2011

Horizon True

Discover the Secret to Winning on the Water

Horizon True presents the self-leveling video camera mount as seen on ESPN2. Record practices, races and regattas, then breakdown every move in your post race analysis using realistic video footage. Learn from your mistakes and beat your competition.

The Secret to Winning

Add a camera to your American made Horizon True camera mount, clamp it to a rail, stanchion, mast or cleat and turn it on. The camera stays level keeping the Horizon True for accurate post race analysis. The self-leveling action and precision hydraulic dampening gives viewers a true on-board experience, which is critical for post race analysis. Review your race, learn from mistakes and from opponents, make adjustments then come back for the victory.

Used by Successful Professionals

Dr. Jeff Mootz, founder of Horizon True, along with Gary Jobson provide on board video in Acura's Key West and Miami Regattas, as seen on ESPN2. Horizon True were also used to film the US Collegiate National Championship as well as US Sailing's coverage of the Olympic Trials as seen on NBC.com. These opportunities have allowed much input from both Gary Jobson's production team and from the sailors. Horizon True responded to the challenge to minimize intrusion while enhancing ease of use by creating an all new model line up. See recent video footage at www.jobsonsailing.com

Fits on Your Boat

Have a boat? Horizon True has a mount! From TP 52 or bigger, to small racing dinghies. Many variations are available to easily allow sailors to video their races. Mounts handle cameras from 4lbs down to small lipstick cameras. For more information log on to www.horizontrue.com or call Dr. Jeff Mootz at Mootz Eye Clinic, 507-665-3366.
